5 sensori, nessun difetto di curvatura

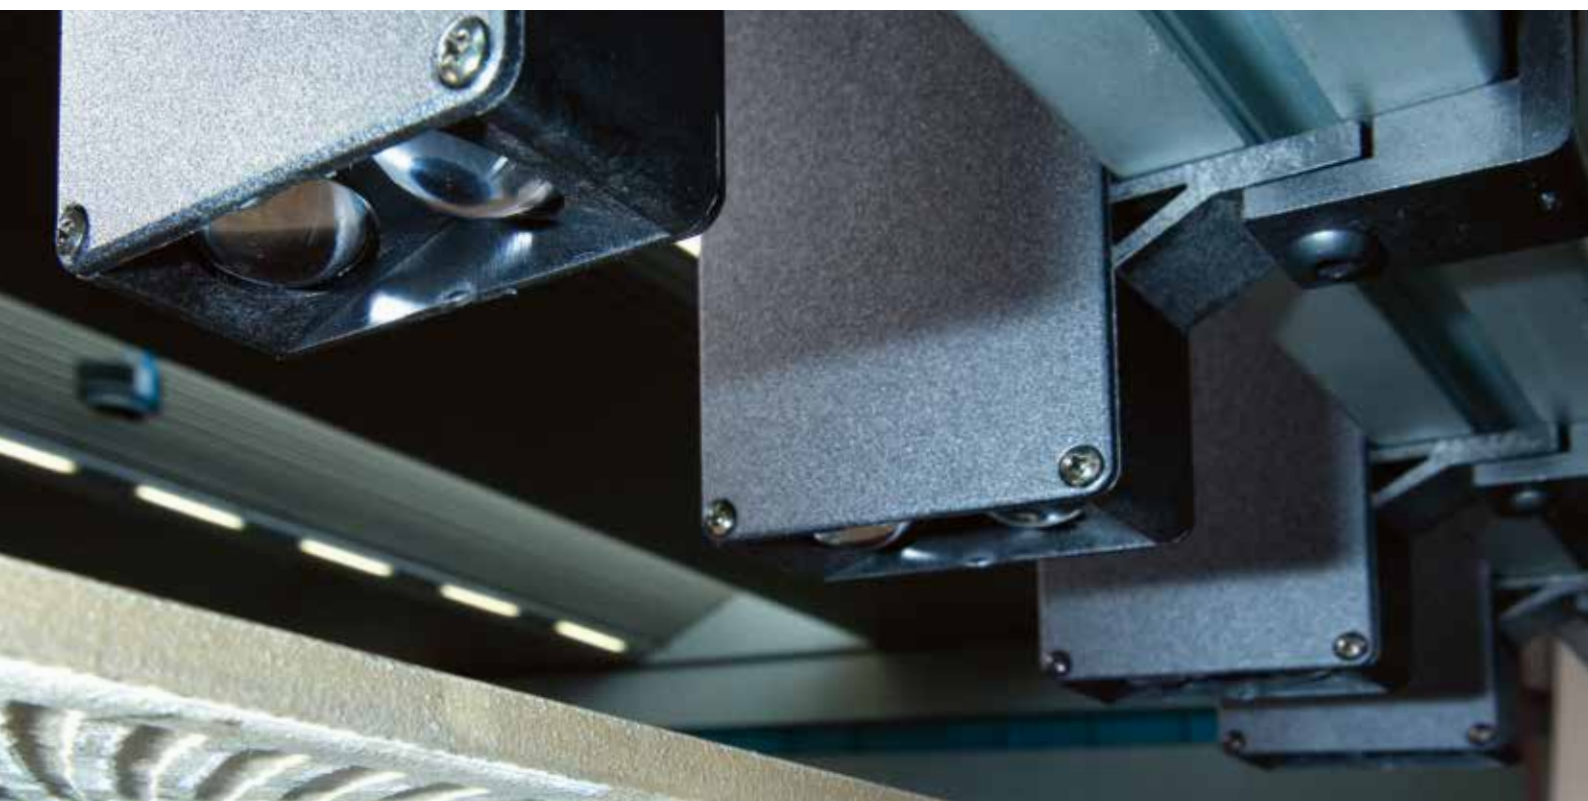

Cruda o cotta, in tutti i formati (esagoni, ottagoni e smussati): qualunque sia la vostra piastrella, Dico Planar legge il materiale tramite sensori ottici, senza nessun contatto con la superficie.

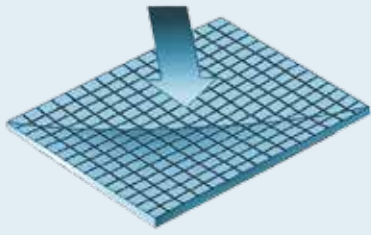

- **Sensori ottici misurano i punti della superficie per creare una matrice.**
- **Si confrontano i parametri e si classifica la piastrella.**
- **Con una piastra campione si tara il sistema e il risultato ha una precisione al decimo di millimetro.**
- **Integrabile con tutte le altre apparecchiature.**
- **Utilizzabile su qualsiasi larghezza della piastrella.**

5 sensors, no curvature faults

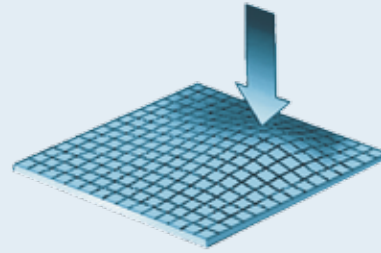

Raw or fired, in all formats (hexagons, octagons and rounded): whatever your tile, Dico Planar reads the material with optical sensors, without any contact with the surface.

- **Optical sensors measure points on the surface to create a matrix.**
- **Parameters are compared and the tile is classified.**
- **A sample tile is used to calibrate the system, with a precision of one tenth of a millimetre.**
- **It can be integrated with all the other device.**
- **It can be used on any tile width.**
